

PUMP GROUP

Derya pump group operates the circulation between collector and boiler. This group supported with pressure control safety tools.

Reference diameter: DN 25, 1"

Advantages:

- Highly functional productivity
- All condenser plates (armatures) are from a single manufacturer
- Complete assembly groups (systems)
- High quality materials
- Time saving assembly
- Short term starting heat: maximum 160°C
- Continuous working heat: maximum 120°C
- With isolation.
- DPG pump group circulates heater fluid between boiler & collectors and have a safety valve with a connection for closed expansion vessel
